

ASP FACTS

PRODUCT: **Tactical Defender®**

ADVANTAGE:

The proprietary aerosol container and specially produced valve system of the Tactical Defender provides straight line dispersion of Oleoresin Capsicum. The Defender attaches to any Tactical Baton®. The safety requires two distinct movements for activation. The Tactical Defender body is precision machined from aerospace aluminum. Internal components are engineering grade Delrin. The system can use its own inserts or Palm Defender™ canisters by means of a conversion tube. The Tactical Defender may be used with or without an attached baton.

SPECIFICATION:

- Precision machined aluminum body
- Two-stage Delrin actuator
- Rapidly attached
- Easily carried
- Compatible with all ASP Batons
- Horizontal activation
- Push away slide safety
- Proprietary aerosol can
- Specially produced valve

PERFORMANCE:

The design of the Tactical Defender places two inconspicuous levels of force in the officer's hand. Acceleration from pain compliance with OC to impact with the ASP Baton is rapid and effortless. Holding the Defender in the traditional ready position, the safety may be pushed off and the OC activated or the baton expanded.

SALES STRATEGY:

Demonstrate the tactical advantage of an integrated pepper spray and expandable baton control system. Illustrate the ease of attachment and transport. Demonstrate the safety of the dual release activation system.
